Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Hazardous Waste Summary:
Waste Code: D001
Waste Description: IGNITABLE WASTE

Waste Code: D002

SUPERVALU INC (Continued) **1004793913**

Waste Description: CORROSIVE WASTE

Waste Code: D008
Waste Description: LEAD

Waste Code: D035
Waste Description: METHYL ETHYL KETONE

Waste Code: D039
Waste Description: TETRACHLOROETHYLENE

Waste Code: F001
Waste Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLORETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F003
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Environmental Interest/Information System:
Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
HAZARDOUS WASTE BIENNIAL REPORTER
ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit

SUPERVALU INC (Continued) **1004793913**

Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Environmental Interest/Information System:
Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
HAZARDOUS WASTE BIENNIAL REPORTER

Hazardous Waste Summary:

Waste Code: D001
Waste Description: IGNITABLE WASTE

Waste Code: D002
Waste Description: CORROSIVE WASTE

Waste Code: D018
Waste Description: BENZENE

Waste Code: D035
Waste Description: METHYL ETHYL KETONE

Waste Code: F003
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F005
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Summary:
Waste Code: D001
Waste Description: IGNITABLE WASTE

Waste Code: D035
Waste Description: METHYL ETHYL KETONE

Waste Code: F003
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F005
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Environmental Interest/Information System:
Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.
US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Environmental Interest/Information System:
Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:
Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:
Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:
Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

US BROWNFIELDS:

Name:	SHAUB-ELLISON PARCEL
Address:	1902 PACIFIC AVENUE
City,State,Zip:	TACOMA, WA 98402
Recipient Name:	University of Washington
Grant Type:	Cleanup
Property Number:	Block 1904, Parcel 17
Parcel size:	0.28
Latitude:	47.24505
Longitude:	-122.43675
HCM Label:	Address Matching-House Number
Map Scale:	1:24,000
Point of Reference:	Center of a Facility or Station
Highlights:	The University of Washington purchased this property in 1993. The property redevelopment involved demolition of an existing commercial building and creation of 0.275 acres of green space. During redevelopment activities approximately 3,700 cubic yards of petroleum contaminated soil was removed from the property. Residual petroleum contaminated soils and groundwater remain at the property and will be addressed in-situ in the Brownfields Cleanup Grant. (PPF - Shaub-Ellison Parcel, 2/10/05) In-situ aerobic groundwater treatment and soil bioventing treatment systems are in place at the property currently and are expected to remain operational for approximately five to 10 years. (PPF - Shaub-Ellison Parcel, 6/21/07)

Name:	SHAUB-ELLISON PARCEL
Address:	1902 PACIFIC AVENUE
City,State,Zip:	TACOMA, WA 98402
Recipient Name:	University of Washington
Grant Type:	Cleanup
Property Number:	Block 1904, Parcel 17
Parcel size:	0.28
Latitude:	47.24505
Longitude:	-122.43675
HCM Label:	Address Matching-House Number
Map Scale:	1:24,000
Point of Reference:	Center of a Facility or Station
Highlights:	The University of Washington purchased this property in 1993. The property redevelopment involved demolition of an existing commercial building and creation of 0.275 acres of green space. During redevelopment activities approximately 3,700 cubic yards of petroleum contaminated soil was removed from the property. Residual petroleum contaminated soils and groundwater remain at the property and will be addressed in-situ in the Brownfields Cleanup Grant. (PPF - Shaub-Ellison Parcel, 2/10/05) In-situ aerobic groundwater treatment and soil bioventing treatment systems are in place at the property currently and are expected to remain operational for approximately five to 10 years. (PPF - Shaub-Ellison Parcel, 6/21/07)

Environmental Interest/Information System:
Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.
RCRAInfo is a national information system that supports the Resource

LILYBLAD PETROLEUM INC EPA 25T (Continued) **1000441154**

Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport,

TACOMA UNION STA (Continued) **1000658790**

and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

~~Click this hyperlink~~ while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.
US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
HAZARDOUS WASTE BIENNIAL REPORTER
ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Tank Name: #5 DIESEL
Tag Number: A0205
Tank Status: Operational
Tank Status Date: 03/29/2011
Tank Install Date: 06/14/2005
Tank Closure Date: Not reported
Capacity Range: 5,000 to 9,999 Gallons
Tank Permit Expiration Date: 04/30/2021
Tank Upgrade Date: Not reported
Tank Spill Prevention: Spill Bucket/Spill Box
Tank Overfill Prevention: Overfill Alarm
Tank Material: Fiberglass Reinforced Plastic
Tank Construction: Double Wall Tank
Tank Tightness Test: Not reported
Tank Corrosion Protection: Corrosion Resistant
Tank Manifold: Not reported
Tank Release Detection: Interstitial Monitoring
Tank SFC Type: Rubber Boot
Pipe Material: Fiberglass
Pipe Construction: Double Wall Pipe
Pipe Primary Release Detection: Automatic Line Leak Detector (ALLD)

FINDS:
Registry ID: 110009512009

Click Here:

Environmental Interest/Information System:
Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Chemical Activities and Uses:

Cas number:		000108952
Document control number:		1318217178932
Chemical name:	PHENOL	
Classification:		TRI
Unit of measure:		Pounds
Produce the chemical:		No

RAINIER RICHLITE CO (Continued) **1000891764**

Import the chemical:	No
On-site use of the chemical:	No
Sale or distribution of the chemical:	No
As a byproduct:	No
As a manufactured impurity:	No
Used as a reactant:	Yes
P101 feedstocks:	No
P102 raw materials:	No
P103 intermediates:	No
P104 initiators:	No
P199 other:	No
Added as a formulation component:	Yes
P201 additives:	No
P202 dyes:	No
P203 reaction diluents:	No
P204 initiators:	No
P205 solvents:	No
P206 inhibitors:	No
P207 emulsifiers:	No
P208 surfactants:	No
P209 lubricants:	No
P210 flame retardants:	No
P211 rheological modifiers:	No
P299 other:	No
Used as an article component:	No
Repackaging:	No
As a process impurity:	No
Processed / recycling:	No
Used as a chemical processing aid:	Yes
Z101 process solvents:	No
Z102 catalysts:	No
Z103 inhibitors:	No
Z104 initiators:	No
Z105 reaction terminators:	No
Z106 solution buffers:	No
Z199 other:	No
Used as a manufacturing aid:	No
Z201 process lubricants:	No
Z202 metalworking fluids:	No
Z203 coolants:	No
Z204 refrigerants:	No
Z205 hydraulic fluids:	No
Z299 other:	No
Ancillary or other use:	No
Z301 cleaner:	No
Z302 degreaser:	No
Z303 lubricant:	No
Z304 fuel:	No
Z305 flame retardant:	No
Z306 waste treatment:	No
Z307 water treatment:	No
Z308 construction materials:	No
Z399 other:	No

Environmental Interest/Information System:
Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington

RAINIER RICHLITE CO (Continued) **1000891764**

Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.
AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.
AIR EMISSIONS CLASSIFICATION UNKNOWN
US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.
US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
HAZARDOUS WASTE BIENNIAL REPORTER
AIR MAJOR
ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Environmental Interest/Information System:
Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

TACOMA CITY CONVENTION CTR GARAGE (Continued) **1011266136**

Environmental Interest/Information System:
US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Environmental Interest/Information System:
Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:

Washington Facility / Site Identification System (WA-FSIS) provides a

SAUROS CLEANERAMA TACOMA (Continued) **1004793451**

means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Form Comm:	Farallon re-activated the WAD number to remove drums of DW soil and groundwater generated in late 2007. Ecology is currently reviewing a contained-in request for a portion of the soils generated in 2007 that contain low concentrations of PCE and/orTCE. Once the contained-in determination is issued Farallon will manage all waste soil and water per Ecology's requirements. The waste disposal activities will be the subject of the 2008 DW reporting year since no waste has been removed.

Environmental Interest/Information System:
Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
HAZARDOUS WASTE BIENNIAL REPORTER

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal
RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators
RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

PTAP: PTAP Site Listing
A list of sites accepted into the Petroleum Technical Assistance Program. The Petroleum Technical Assistance Program (PTAP) expands the state's ability to respond to the high customer demand to clean up petroleum contaminated sites. Under the PTAP, the Pollution Liability Insurance Agency (PLIA) may provide informal site-specific technical consultations and issue written opinion letters to persons conducting independent remedial actions at qualifying petroleum cleanup sites. PLIA may provide these services under the authority of RCW 70.149.040(9) and the Model Toxics Control Act (MTCA), Chapter 70.149 RCW and Chapter 173-340 WAC.

Date of Government Version: 05/12/2020

State and tribal Brownfields sites

BROWNFIELDS: Brownfields Sites Listing

A listing of brownfields sites included in the Confirmed & Suspected Sites Listing. Brownfields are abandoned, idle or underused commercial or industrial properties, where the expansion or redevelopment is hindered by real or perceived contamination. Brownfields vary in size, location, age, and past use -- they can be anything from a five-hundred acre automobile assembly plant to a small, abandoned corner gas station.

Date of Government Version: 07/13/2020

Data Release Frequency: Quarterly

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs
A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR Hist Cleaner: EDR Exclusive Historical Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

TACOMA/PIERCE COUNTY:

LF TACOMA/PIERCE: Closed Landfill Survey
Following numerous requests for information about closed dumpsites and landfills in Pierce County, the Tacoma-Pierce County Health Department decided to conduct a study on the matter. The aim of the study was to evaluate public health risks associated with the closed dumpsites and landfills, and to determine the need, if any, for further investigations of a more detailed nature. The sites represent all of the known dumpsites and landfills closed after 1950.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health
Telephone: 301-594-6248
Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on private school locations in the United States.

Daycare Centers: Daycare Center Listing
Source: Department of Social & Health Services
Telephone: 253-383-1735

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Parametrix, Inc. were identified for the years listed below (selected maps only*). The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

PHASE II ENVIRONMENTAL SITE ASSESSMENT AND REMEDIAL COST ESTIMATE FREIGHTHOUSE SQUARE TACOMA, WASHINGTON

1.0 INTRODUCTION

Shannon & Wilson, Inc. has completed a Phase II Environmental Site Assessment (ESA) for the Freighthouse Square (FHS) property located at 2501 East "D" Street in Tacoma, Washington (Figure 1). Our services were conducted for Parsons Brinkerhoff on behalf of the Washington State Department of Transportation (WSDOT) in accordance with Amendment Nos. 2 and 3 to the subconsultant agreement between Parsons Brinckerhoff and Shannon & Wilson, Inc. (dated January 1 and March 5, 2015, respectively).

1.1 Purpose of Phase II Environmental Site Assessment (ESA)

The purpose of this Phase II ESA was to evaluate the recognized environmental conditions (RECs) identified for the a portion of the FHS property evaluated during the Phase I ESA (Shannon & Wilson, Inc., 2015b). It is also to support property appraisal and design of a new Amtrak station and platform (including evaluating end-use options during construction).

1.2 Scope of Services

The scope of services included the following tasks:

- Preparation of a project Sampling and Analysis Plan (SAP);
- Advancement of 12 geoprobes® (GP-1 through GP-12) to collect soil samples for chemical analysis;
- Advancement of 11 hollow-stem auger borings (GP-13 through GP-23) to collect soil samples for chemical analysis;
- Analysis of up to four soil samples from each exploration for contaminants of potential concern (CPOC);
- Well development of two monitoring wells (FHS-1 and FHS-5) installed for the project geotechnical exploration program;
- Sampling of groundwater from two monitoring wells (FHS-1 and FHS-5) for chemical analysis;
- Sampling of groundwater from four geoprobes and five auger borings for chemical analysis;

- Review of additional resources to evaluate parcels surrounding the portion of FHS to be acquired; and
- Preparation of this Phase II ESA report.

Our report includes a summary of analytical data collected during the environmental and geotechnical explorations conducted for the project. Discussion of geotechnical field activities is provided under separate cover.

The scope focused on identifying and evaluating environmental concerns with significant potential to contaminate the property. The field sampling was a screening level effort intended to identify potential widespread contamination rather than a comprehensive investigation to define the lateral and/or vertical extent of soil and/or groundwater contamination.

2.0 BACKGROUND

2.1 Site Description

The FHS property, for the purpose of this report, is comprised of the following Pierce County tax parcels (shown in Figure 2):

- 2075200011 (FHS Parking Lot)
- 2075220011 (FHS West Parcel)
- 2075220015 (FHS Platform)
- 2075240011 (FHS Center Parcel)
- 2075240013 (FHS East Parcel)
- 2075220016 (Sound Transit right-of-way [ROW])
- 2075220050 (Bish parcel)

The FHS property is in a commercial/industrial area of the City of Tacoma located to the south of Commencement Bay and to the north of the Tacoma Dome. Contours on the U.S. Geological Survey (USGS) topographic map (Tacoma South Quadrangle) (USGS, 1961) indicate ground surface elevation across the FHS property ranges between approximately 60 feet (on its west end) and 20 feet (on its east end) above sea level.

2.2 Site History

The Phase I ESA indicated that the FHS property was occupied by residences from as early as 1888 until 1908 when the current FHS building was constructed. FHS served as the westernmost terminus for the Milwaukee, St. Paul, and Pacific Railroads until 1980. It was reportedly vacant until 1987 (Oocities, 2015) when it was converted to a public market. It has since been occupied

by shops, restaurants, and offices. Railroad tracks have occupied the adjacent parcel to the south since the late 1800s.

A more detailed history of the FHS property and surrounding properties, by block, is provided in Appendix C.

The FHS property is subject to a Restrictive Covenant due to historical contamination found in soil and groundwater at the eastern end of the building. Restrictions in the covenant that may impact the project include (but are not limited to): (a) no removal of groundwater, (b) no site activities may interfere with "continued protection of human health and the environment," and (c) no site activity may result in a release or exposure or creation of a new exposure pathway.

3.0 PREVIOUS STUDIES

3.1 1994 Site Remediation Report

During construction of the eastern portion of the building, petroleum and metals contamination were discovered in site soil and groundwater. This report summarizes removal action (excavation and offsite disposal of contaminated soil), soil confirmation sampling, and groundwater sampling completed by others (Engineering Geosciences, Inc., 1994).

Confirmation soil analytical testing indicated that contaminant concentrations were below Washington Model Toxics Control Act (MTCA) criteria. Groundwater testing (from grab samples collected from open excavations which is not in accordance with U.S. Environmental Protection Agency [EPA] protocols) found heavy petroleum and metals concentrations exceeding MTCA criteria. The report indicated potential sources of the contamination are the former onsite machine shop and the former foundry located to the south. Groundwater flow direction was estimated to the northwest, though could flow more north or northeasterly.

3.2 1999 Phase I Environmental Site Assessment (ESA)

To support property purchase, a Phase I ESA of the FHS property was completed for Sound Transit (Shannon & Wilson Team, 1999). The parcels included in this evaluation included: 2075220011, 2075220015, 2075220016, 2075240011, and 2075240013 (Figure 2). A summary of parcel histories is provided in Appendix C.

According to this report, the east end of building is at approximate 20 feet mean sea level (MSL) and west end is approximately at 50 feet MSL with groundwater elevations ranging between

13 to 20 feet MSL from east to west. Overall shallow groundwater flow was estimated to be northward.

During the site reconnaissance, the following observations were made: no dry wells or tanks were observed; the basement of the eastern building is concrete slab with no visible floor drains; the basement contained personal storage for the property owner and a small maintenance shop; no staining was observed around containers of latex paint, glues, and sealing compounds; and no unidentified pipes were observed.

Concerns identified in that report included:

- Placement of fill in the northeast portion of the property – unknown source or quality.
- Former railroad use – potential for unreported spills, leaching of oils into ballast and underlying soils.
- Dwellings on site may have used oil stored in underground or aboveground storage tanks.
- Adjacent residences, and commercial and industrial businesses (junk storage, mattress manufacturer, fuel transfer company, trucking company, foundry, casket manufacturer, machine shop, auto repair) may have used regulated materials.

3.3 Sound Transit Tacoma Trestle Data

Several borings were completed to support the Sound Transit Tacoma Trestle project, including design of the platform that will be coordinated between the WSDOT and Sound Transit design teams (Shannon & Wilson, Inc., 2015d). Specifically, four geotechnical borings were completed in the alley along the southeast portion of the FHS building, and two geoprobes and three geotechnical borings were completed east and south of the ROW, between the tracks and East "G" Street (Figure 3). Limited environmental sampling of soil and/or groundwater and analytical testing were completed at each of the explorations.

Soil analytical testing data indicate that elevated concentrations of carcinogenic polynuclear aromatic hydrocarbons (cPAHs) and oil are present in SW-17-15 and SW-19-15, respectively. Specifically, cPAHs were detected at 1.15 milligrams per kilogram (mg/kg) at 15 feet below ground surface (bgs) in SW-17-15, exceeding the 1996 MTCA Method A criterion of 1 mg/kg. Oil was detected at 570 mg/kg at 7.5 feet bgs, above its criterion of 200 mg/kg in SW-19-15. Data associated with these two borings (and other Tacoma Trestle explorations) are contained in Appendix D.

3.4 Phase I Environmental Site Assessment (ESA) Results

The Phase I ESA report for the portion of the FHS property to be purchased identified RECs that could potentially impact site soils and groundwater (Shannon & Wilson, Inc., 2015b). Releases could have occurred from:

- Potential former and/or existing fuel oil underground storage tank(s) (USTs) on the property or on adjacent parcels;
- Long-term railroad use: oil-range petroleum hydrocarbons (track lubricants), polychlorinated biphenyls (PCBs); vegetation controls), and polynuclear aromatic hydrocarbons (PAHs); creosote-treated railroad ties).

3.5 Additional Report Review

Two known contaminated sites are located adjacent north of the FHS property:

- Tacoma Dome Station Site
- Carman Manufacturing Site

While they appear to be downgradient, the reports provide some information regarding groundwater flow direction in the vicinity of FHS. Information relating to these two sites was obtained for the 1999 Phase I ESA (summarized in Paragraph 3.2). Additional details are provided below.

3.5.1 Carman Manufacturing

This site is adjacent northeast of the FHS property, across the intersection of East "G" Street and East 25th Street. Diesel-range petroleum contamination was detected in site soil and groundwater, apparently released from a decommissioned UST. In 1999, a letter in the Washington State Department of Ecology's (Ecology's) file indicated that a passive venting system was proposed for site cleanup. Groundwater flow direction, as measured once in three monitoring wells, is to the north-northwest (Creative Environmental Technologies, Inc., 1998a, 1998b, and 1998c).

3.5.2 Tacoma Dome Station

This site is adjacent north of the FHS property, north of East 25th Street. Soil contamination was discovered on this site prior to construction of the bus station. Soil contamination was reportedly remediated to below MTCA Method A cleanup criteria in accordance with a consent decree. Groundwater contaminants included diesel-range petroleum, lead, and methylene chloride. In 1999, elevated petroleum remained in one location, elevated

total lead remained in five locations, and elevated methylene chloride remained in one location. Groundwater was undergoing monitoring. Groundwater flow direction at the site (as estimated from measurements collected from ten wells) is to the north-northeast (Hong West & Associates, Inc., 1994, 1996, 1997, and 1998).

4.0 GEOLOGIC AND HYDROGEOLOGIC SETTING

This section describes the general geologic setting of the site vicinity and discusses the subsurface conditions beneath the Site and surrounding area as they relate to the potential for contamination to migrate through the soils and groundwater. The geologic and hydrogeologic summaries below are based on Shannon & Wilson, Inc.'s environmental and geotechnical explorations conducted at the Site.

4.1 Geologic Setting

During the Pleistocene Epoch (2 million years ago to about 10,000 years ago), the Puget Lowland was subjected to six or more major glaciations. Each glaciation deposited new sediment and partially eroded existing deposits. During the intervening periods when glacial ice was not present, stream processes, wave action, and landsliding eroded and reworked some of the glacially derived sediment.

During the most recent glaciation that covered the central Puget Lowland (termed Vashon), the weight of the glacial ice resulted in compaction (consolidation) of glacial and nonglacial soil. The glacially overridden deposits are overlain by recessional glacial deposits that accumulated during the retreat of the Vashon ice sheet and by younger (Holocene Epoch) soils. Vashon-age deposits in the project area include till (Qvt).

Within the project area, erosion during the retreat of the Vashon ice sheet exposed the underlying, pre-Vashon deposits. Pre-Vashon deposits in the project area include nonglacial lacustrine (Qpnl), nonglacial fluvial (Qpnf), lahar (Qpnm), and till (Qpgt).

During the Holocene, the Puyallup River deposited sediment into a former marine embayment at the east end of the project. River deposits are interbedded with marine and estuarine deposits and juxtaposed next to beach deposits. Additionally, beginning in the early 20th Century, the area underwent man-made modifications that included fill placement. Holocene deposits encountered in the project area include alluvium (Ha), estuarine (He), peat (Hp), and fill (Hf).

4.2 Site Geology

We interpreted geologic units present in the project area based on environmental and geotechnical explorations completed for this project. Units are grouped on the basis of relative age and whether the deposits are glacially overridden. Detailed soil descriptions are presented in the exploration logs in Appendix A. Refer to Appendix D of this report and our geotechnical report (Shannon & Wilson, Inc., 2015d) for exploration logs from the nearby Tacoma Trestle project.

Explorations encountered Hf across the site. We identified Hf based on the presence of irregular clasts of one soil type within soil of another type; disturbed appearance; and from the presence of unnatural debris such as brick, glass, coal, asphalt, organics, and wood. Hf in the project area consists of a wide range in soil types and is highly variable in soil density/consistency. Hf ranged from loose to very dense sand and gravel with variable amounts of silt, to soft clay with gravel and sandy silt. Hf is generally 3 to 15 feet thick, but is 17 to 27 feet along track embankment and related fill (GP-16-15 and GP-18-15) and along East 25th Street (GP-13-15, GP-15-15, and GP-17-15).

At the east end of the project, boring GP-19-15 encountered 10 feet of Ha and GP-20-15 encountered 16.5 feet of He deposits underlying Hf. Ha consists of medium dense, silty sand and He consists of very soft silt. Ha and He deposits are interbedded with peat.

Where Ha and He were not present, explorations encountered Qvt underlying Hf. Many explorations did not extend through the Qvt layer. Qvt consists of very dense, silty sand and sandy silt with gravel.

Explorations that extended below Qvt (GP-16-15 and FHS-3) encountered Qpnf interlayered with Qpnl and Qpnm. Qpnf consists of poorly graded sand and gravel with variable amounts of silt. Qpnl consists of sandy silt and silty sand. Qpnm consists of very stiff to hard, sandy silt; silty sand; and silt.

4.3 Hydrogeologic Setting

Groundwater was observed in geoprobes and monitoring wells ranging in depths from approximately 10 to 38 feet from west to east across the site. Specifically, groundwater was estimated between:

- FHS Parking Lot: 13 to 14 feet bgs
- FHS West Parcel: 10 to 17 feet bgs
- FHS Center Parcel: 16 to 25 feet bgs

- FHS East Parcel: 5 to 38 feet bgs
- Bish Parcel: 25 feet bgs

Depth to groundwater measurements collected during drilling or subsequent monitoring well sampling are indicated in our logs contained in Appendix A.

Limited groundwater data suggests local groundwater flow direction varies across the site because of changes in topography, the varying underlying till surface, and the proximity to the filled tideflats. We estimate groundwater flow is more northerly at the western end of the FHS property and becomes more northeasterly to easterly near the FHS center parcel. Towards the eastern end of the FHS property, flow may be more northward with a potential for confined artesian groundwater conditions (Shannon & Wilson, Inc., 2015d). However, sudden rises in the water table following heavy rains can cause temporary and local changes, as well as reversals in flow direction, due to uneven infiltration rates.

5.0 FIELD EXPLORATIONS

Shannon & Wilson, Inc. developed a SAP that included soil and groundwater sampling from probes, auger borings, and/or monitoring wells to investigate RECs (Shannon & Wilson, Inc., 2015g). The SAP was based on discussions with and concurrence from Ecology. The rationale and results for each of the elements of the exploration program are summarized below.

Table 1 summarizes the field explorations and analytical testing completed on select samples.

5.1 Locations

Shannon & Wilson, Inc. observed completion of 12 geoprobes and 14 auger borings (Figures 3 and 4). From west to east, the explorations are located on (or associated with) the following parcels:

- FHS Parking Lot: GP-10 and GP-11
- FHS West Parcel: GP-1 though GP-6, GP-12, FHS-1, and FHS-2
- FHS Center Parcel: GP-13 through GP-16
- FHS East Parcel: GP-17, GP-19, GP-20
- Sound Transit ROW: GP-7 through GP-9, GP-18, FHS-3, and FHS-5
- City of Tacoma ROW: GP-21
- Bish parcel: GP-22 and GP-23

To evaluate conditions relating to these parcels, several explorations were completed in the adjacent City of Tacoma ROW. Explorations were not completed through the floor of the

existing building and utilities along the northern part of the building warranted that explorations be completed in East 25th Street.

No explorations were completed on the FHS platform parcel.

The explorations were completed under several mobilizations using different drilling techniques. FHS-1 and FHS-2 were completed in November 2014. GP-1 through GP-9 and FHS-3 and FHS-5 were completed in May 2015. The remainder of the explorations was completed in August 2015.

5.2 Sampling Activities

5.2.1 November 2014

Holt Services, under subcontract to Shannon & Wilson, Inc., completed geotechnical auger borings FHS-1 and FHS-2 located in the platform portion of the FHS West Parcel (Figures 3 and 4) (Shannon & Wilson, Inc., 2015a). In FHS-1, a 2-inch, flush-mount monitoring well was installed. No other explorations were completed during this mobilization.

Soil samples from the geotechnical borings were collected to characterize investigation-derived waste (IDW) for disposal and are being used to supplement the data collected from environmental explorations. A petroleum odor was observed during drilling at FHS-1; no other field indications of contamination were observed during drilling of the other exploration.

5.2.2 May 2015

We observed geoprobe and auger drilling (completed by Holt Services). Explorations were located in City of Tacoma ROW, on the FHS West Parcel, and in the Sound Transit ROW. Where required, utilities were cleared using a vacuum truck prior to drilling. Two-inch monitoring wells were installed in FHS-3 and FHS-5.

To support groundwater sampling, FHS-1 (installed in November 2014) and FHS-5 were developed during this mobilization. A petroleum odor was observed during well development at FHS-1. Field indications of contamination were not observed during soil or groundwater sampling at other locations.

5.2.3 August 2015

Additional explorations were completed by Holt Services in August 2015 and they include GP-10 through GP-23 (Figures 3 and 4). GP-10 through GP-12 were completed using a

geoprobe rig. The remaining 11 explorations were accomplished using hollow-stem auger drilling using either a limited access, rubber tire rig, or a full-sized truck rig.

Soil sampling (for analytical testing purposes) was completed at each location. Groundwater sampling was completed from the three probe locations and select auger locations (by open hole).

5.2.4 Soil and Groundwater Sampling

A total of 88 soil and 11 groundwater samples were collected from the environmental and geotechnical explorations over the three mobilizations in general accordance with our SAPs (Shannon & Wilson, Inc., 2015c and 2015g). Not every sample was analyzed and selected samples and methods requested are indicated in Table 1.

Groundwater samples were collected from probe GP-1 and monitoring wells FHS-1 and FHS-5. During water sampling, extremely low oxygen reduction potential and dissolved oxygen were measured. These low parameter measurements are likely due to degradation of hydrocarbons.

During the August 2015 mobilization, no groundwater sample was collected from GP-13 and no duplicate samples were collected. This was because of the duration required to obtain water samples and the limited work window in the street and/or platform (which required track time).

5.3 Investigation-Derived Waste (IDW)

IDW generated during sampling included soil cuttings, decontamination fluids, purge water, used personal protection equipment (PPE), and disposable sampling equipment. Soil cuttings, decontamination fluids, and purge water were contained in labeled WSDOT-approved drums temporarily stored on the Sound Transit ROW, next to the signal bungalow. The drums from April 2015 were removed from the site on July 17, 2015. PPE and disposable sampling equipment were placed in a plastic bag and disposed as solid waste. Offsite disposal of drums generated from August 2015 activities are pending.

6.0 ANALYTICAL METHODS

Samples were submitted to OnSite Environmental, Inc. (OnSite) in Redmond, Washington, for chemical analysis. In accordance with the SAP (Shannon & Wilson, Inc., 2015g), select soil samples from explorations were initially analyzed for COPCs. Based on initial results, follow-up

analysis on initial samples, or other additional samples collected from each exploration was completed.

Soil samples were analyzed by one or more of the following methods:

- Gasoline-range petroleum hydrocarbons using Method Northwest Total Petroleum Hydrocarbon (NWTPH) gasoline-range extended (Gx);
- Diesel- and oil-range petroleum hydrocarbons using Method NWTPH diesel-range extended (Dx) with silica gel cleanup;
  - Follow-up analysis for PCBs by EPA Method 8082 were conducted on soil samples with detection of oil-range petroleum hydrocarbons.
- Resource Conservation and Recovery Act metals (arsenic, barium, cadmium, chromium, lead, mercury, selenium, and silver) by EPA Method 6000/7000 series;
- Copper, nickel, and zinc by EPA Method 6000/7000 series
- Semivolatile organic compounds (SVOCs) by EPA Method 8270D/Selective Ion Monitoring (SIM) or PAHs by EPA Method 8270D; and
- Volatile organic compounds (VOCs) by EPA Method 8260C.

Groundwater samples were analyzed by one or more of the following methods:

- Gasoline-range petroleum hydrocarbons using Method NWTPH-Gx;
- Diesel- and oil-range petroleum hydrocarbons using Method NWTPH-Dx with silica gel cleanup;
- Total and dissolved Priority Pollutant metals by EPA Method 6000/7000 series;
- SVOCs by EPA Method 8270D/SIM; and
- VOCs by EPA Method 8260C.

7.0 QUALITY ASSURANCE/QUALITY CONTROL (QA/QC)

7.1 April 2015

Laboratory QA/QC procedures included analyzing surrogate recoveries, method blanks, laboratory control sample recoveries, matrix spike recoveries, and duplicates. Trip blanks were submitted with groundwater samples intended for VOC testing. Equipment and/or field blanks were not specified for this project.

The analytical laboratory data review checklists presented in Appendix B summarize our review of the laboratory reports and QA/QC data and the trip blanks. Some QA/QC issues were noted by OnSite and flagged in their report.

None of the analyzed parameters were detected in their respective method blanks. Gasoline-range petroleum hydrocarbon and VOC analyses for soil samples collected on May 7, 2015, and were not extracted within recommended hold times. The locations were resampled and submitted for analysis. SVOC analysis for GP-4:1.2 slightly exceeded its hold time due to QC issues with the original sample that required re-extraction. The hold time exceedance is not expected to significantly affect the SVOC results for sample GP-4:1.2. Several parameters had surrogate, duplicate, and matrix spike recoveries that fell outside of laboratory control limits. However, the methods were otherwise in control.

A field duplicate for soil was collected from sample GP-3:10 and for groundwater from GP-1:GW. No parameters detected in the soil sample had a relative percent difference that exceeded 25 percent. However, diesel- and oil-range petroleum hydrocarbons, some total metals, acetone, and several SVOCs had a relative percent difference that exceeded 25 percent and were within 5 times the project quantitation limit (10 times for common lab contaminants) and were J-flagged as estimates. Due to the inherent variability in groundwater samples collected from probes, differences between sample and duplicate sample results is not unreasonable.

Based on our review of the QA/QC data and associated issues, the data are acceptable with the exceptions noted below.

7.2 August 2015

Laboratory QA/QC procedures included analyzing surrogate recoveries, method blanks, laboratory control sample recoveries, matrix spike recoveries, and duplicates. Trip blanks were submitted with groundwater samples. Equipment and/or field blanks were not specified for this project.

The analytical laboratory data review checklists presented in Appendix B summarize our review of the laboratory reports and QA/QC data and the trip blanks. Some QA/QC issues were noted by OnSite and flagged in their report.

None of the analyzed parameters were detected in their respective method blanks or in the trip blanks. OnSite flagged acetone in sample GP-11-15:GW as an estimate due to drift in calibration verification and a J-flag was assigned to this sample. Several parameters had surrogate, duplicate, and matrix spike recoveries that fell outside of laboratory control limits. However, the methods were otherwise in control, except for chromium in lab report no. 1508-080. The relative percent difference (RPD) for the laboratory duplicate, the matrix spike/matrix

spike duplicate, and the field duplicate for chromium exceeded control limits. Because of these exceedances, chromium in the following samples were J-flagged as estimates:

- GP-12-15:1.5
- GP-12-15:13.0
- GP-11-15:0.5
- GP-11-15:13.5
- GP-10-15:0.5
- GP-10-15:13.0

Five total field duplicates for soil were collected for 47 samples. No groundwater field duplicates were collected. Several parameters detected in the soil samples had an RPD that exceeded 25 percent from their respective duplicate detections. The majority of these detected concentrations were low compared to screening criteria and no further action was taken. However, the lube oil detections in GP-11-15:13.5 and GP-13-15:6 were J-flagged as estimates because the detections were within 5 times their respective screening criterion.

Based on our review of the QA/QC data and associated issues, the data are acceptable with the exceptions noted below.

8.0 ANALYTICAL RESULTS

Tables 2 through 8 provide a summary of detected soil analytical results. Table 9 provides a summary of detected groundwater analytical results for the FHS and Sound Transit parcels. Table 10 summarizes groundwater data for the Bish parcel. Table 11 provides the toxicity equivalency factor (TEF) analysis of the individual cPAHs constituents. The TEF method is used to adjust the concentrations of individual cPAHs such that they are relative in toxicity to benzo(a)pyrene, which is the most carcinogenic of the PAHs. The individual cPAH concentrations are then summed for comparison with the MTCA Method A cleanup criterion for benzo(a)pyrene.

To assist with appraisal purposes, the data are discussed separately by parcel. As required by Ecology comment and stated in their periodic review of the property, 1996 MTCA Method A criteria applies to the FHS parcels (Parking Lot, West Parcel, Center Parcel, and East Parcel). (The criteria are provided in the FHS-related data tables and Appendix E contains Tables 1 and 2 of the regulation [Ecology, 1996]). MTCA Method B criteria are also included with the soil tables (Ecology, 2015). For the Bish parcel, Sound Transit ROW parcel, and City of Tacoma ROW, only the 2013 MTCA criteria (Ecology, 2013) are provided as it is not under the Restrictive Covenant applied to the FHS property. Exceedance of applicable MTCA criteria are shown in Figure 5.

Analytical laboratory reports are presented in Appendix B.

8.1 Freighthouse Square (FHS) Parking Lot

On this parcel, petroleum was detected in near surface soil in the western portion of the lot (GP-10). Diesel- and oil-range hydrocarbons and cPAHs exceed the 1996 MTCA Method A criteria.

In the eastern portion of the lot, oil-range hydrocarbons were detected in soil at the approximate water table (GP-11) and concentrations exceed the 1996 criteria. Oil-range hydrocarbons were not detected in groundwater from this location.

Groundwater samples found elevated total metals concentrations exceeding the 1996 criteria. No metals were detected above their reporting limits by dissolved metals analysis. Acetone was detected in both groundwater samples.

8.2 Freighthouse Square (FHS) Building (West, Center, and East Parcels)

8.2.1 Soil

Along these three parcels, elevated oil (relative to 1996 criteria) was detected in near-surface soil samples from GP-13, GP-15, and GP-19 (ranging from 380 to 4,300 mg/kg).

Elevated cPAHs were detected in soil at 6 feet in GP-14, which is located within the FHS alleyway/plaza south of the FHS center parcel. cPAHs were generally not detected in the samples obtained from the subsurface and water table samples.

Elevated oil was detected in GP-4 in shallow subsurface soil (460 mg/kg) and at 5 feet (690 mg/kg). Elevated oil was not detected at groundwater depth.

Just west of GP-4 is FHS-1, both diesel- and oil-range hydrocarbons were detected above 1996 criteria in samples collected from below the water table.

8.2.2 Groundwater

Groundwater samples were collected from GP-1 and FHS-1, both located on the FHS West Parcel. Diesel-range hydrocarbons were detected at 360 and 670 micrograms per liter (ug/L), less than the 1996 criterion of 1,000 ug/L.

In FHS-1, dissolved arsenic was detected at 13 ug/L (exceeding its criterion of 5 ug/L). Acetone was also detected.

At the eastern end of the building, diesel- and oil-range petroleum was detected in groundwater from GP-20 and detections are below 1996 criteria. Similar to FHS-1, elevated dissolved arsenic and acetone were detected.

8.3 Freighthouse Square (FHS) Platform

No explorations were completed within this parcel.

8.4 Sound Transit Right-of-Way (ROW)

Four explorations were completed within the Sound Transit ROW. Elevated cPAHs were detected in two near-surface samples (GP-7 and GP-18), relative to 2013 criteria. No elevated cPAHs was detected in deeper samples. Petroleum was not detected above criteria.

No COPCs were detected above reporting limits in groundwater collected from FHS-5.

8.5 City of Tacoma Right-of-Way (ROW)

No COPCs were detected in soil above criteria, most not detected above reporting limits. No groundwater sample was collected from this parcel.

8.6 Bish Parcel

No COPCs were detected in soil above 2013 criteria, most not detected above reporting limits.

Groundwater was sampled in GP-22 (the northern exploration on this parcel). While total arsenic and lead exceed 2013 criteria, no dissolved metals were detected above their reporting limit. No VOCs or petroleum were detected above reporting limits in groundwater.

9.0 CONCLUSIONS

9.1 General

9.1.1 Soil

Overall, petroleum-range hydrocarbons and cPAHs are present in soil both above and below MTCA criteria. Metals in soil do not appear to be a concern. Some SVOCs and VOCs were detected. If no MTCA Method A criterion is available, no discussion is provided in the parcel-specific paragraphs that follow.

The specific sources of these contaminants in soil have not been determined during this evaluation and are not identified below. Potential sources of soil contamination may include fill placed on site (of unknown/variable quality), historical railroad use, or other historical site use.

9.1.2 Groundwater

In groundwater, petroleum was detected in two locations. One concentration exceeded applicable criteria. Several metals, VOCs, and SVOCs were detected in groundwater samples. If no MTCA Method A criterion is available, no discussion is provided in the parcel-specific paragraphs that follow.

Elevated total metals concentrations were detected in groundwater samples exceeding both 1996 and 2013 criteria (primarily arsenic, chromium, and lead). With two exceptions, no metals were detected above their reporting limits by dissolved metals analysis. Given this, it is likely that the elevated total metals concentrations are largely associated with sample turbidity.

As with soil, no source(s) of groundwater contamination has been determined.

9.2 Freighthouse Square (FHS) Parking Lot

Petroleum exceeds criteria in near-surface soil at GP-10. Since petroleum was not detected in the 6- or 13-foot sample, it appears this contamination may have resulted from a surface release.

In GP-11-15, elevated oil was detected at water table depth but not detected in near-surface soil or at 6 feet. This exceedance may have been a result from a nearby release or from a release that occurred offsite and migrated on site.

Groundwater samples found elevated total metals concentrations exceeding 1996 criteria. No metals were detected above their reporting limits by dissolved metals analysis. Given this, it is likely that the elevated total metals concentrations are associated with sample turbidity. The source of acetone in groundwater is not known.

9.3 Freighthouse Square (FHS) Building (West, Center, and East Parcels)

As noted previously, several explorations are located with City of Tacoma ROW while they are intended to evaluate potential concerns associated with the FHS site.

9.3.1 Soil

Along these three parcels, elevated oil (relative to 1996 criteria) was detected in several near-surface soil samples but not in shallow subsurface or at water table depth samples. This suggests that surface spills are the source of these detections.

Elevated cPAHs were detected in soil at 6 feet in GP-14, but not detected in the samples obtained from the subsurface and water table samples. The source of this contamination is not known.

Elevated oil was detected in GP-4 in shallow subsurface soil, but not at groundwater depth. Since elevated concentrations exist beginning just beneath the pavement, the source of this contamination is likely due to some sort of surface release.

Just west of GP-4 is FHS-1, both diesel- and oil-range hydrocarbons were detected above 1996 criteria in samples collected from below the water table. (Water was measured at about 14.5 feet in May 2015 and soil samples were collected from 17.5 and 20 feet.) Field indication of contamination (petroleum odor) was observed as shallow as 9.5 feet. Given the proximity of these locations and some similar contaminants, the soil contamination at FHS-1 could be connected to soil contamination observed at GP-4.

Elevated concentrations of cPAHs and oil are present in SW-17-15 and SW-19-15, respectively, located within the plaza/access road. Specifically, cPAHs were detected at 1.15 mg/kg at 15 feet bgs, exceeding the 1996 criterion of 1 mg/kg. This sample from SW-17-15 was collected of fill, near the fill-native soil interface. Depth to groundwater in this location was observed at about 22.5 feet bgs during drilling. Elevated oil was detected at 7.5 feet bgs in SW-19-15. This sample was collected from fill. Depth to groundwater in this location was observed at about 21 feet bgs during drilling. The source(s) of these detections are not known but may be related to the former machine shop once located on the FHS East Parcel, or the former foundry that was located south of this area, across the railroad tracks (Figure 4).

9.3.2 Groundwater

Petroleum was detected in two groundwater samples (GP-1 and FHS-1, FHS West Parcel). The source of the groundwater impact is not known. However, soil contamination was identified in samples were collected from the near surface down to water table depth in FHS-1 and/or GP-4. Therefore, a case could be made that the contamination was the result of a local surface release. The detected groundwater concentrations are less than the 1996 criterion of 1,000 ug/L, however, the concentration in FHS-1 exceeds the 2013 criteria of 500 ug/L. If site

groundwater should migrate off site (outside of the area defined in the Restrictive Covenant), the FHS-1 concentration in groundwater could require remedial action. (The concentration in GP-1, which is technically offsite in the City of Tacoma ROW, is currently lower than the 2013 criteria.)

In FHS-1, dissolved arsenic was detected at 13 ug/L (exceeding its criterion of 5 ug/L). Acetone was also detected.

At the eastern end of the building, diesel- and oil-range petroleum was detected in groundwater from GP-20; detections are below 1996 criteria. Similar to FHS-1, elevated dissolved arsenic and acetone were detected.

9.4 Freighthouse Square (FHS) Platform

No explorations were completed within this parcel.

9.5 Sound Transit Right-of-Way (ROW)

Elevated oil-range hydrocarbons were detected in two near-surface samples (GP-7 and GP-18-15). No elevated oil was detected in deeper samples, with the exception of GP-7 at 5 feet (collected from fill). The oil contamination likely resulted from a surface release in the vicinity of these explorations.

Based on limited sampling, groundwater does not appear to be impacted beneath the Sound Transit ROW.

9.6 City of Tacoma Right-of-Way (ROW)

Based on limited sampling, neither soil nor groundwater appear to be impacted beneath the City of Tacoma ROW located south of Sound Transit ROW.

9.7 Bish Parcel

Based on limited sampling, neither soil nor groundwater appear to be impacted beneath the Bish parcel.

10.0 REMEDIAL COST ESTIMATE

For WSDOT planning purposes, we have identified the following hazardous materials-related items and prepared associated costs to remediate the FHS property. For the purpose of this cost

estimate, the site has been divided into the following Pierce County tax parcels/group of parcels/portion of parcels (shown in Figure 2):

- 2075200011 (FHS Parking Lot)
- 2075220011 (FHS West Parcel), 2075240011 (FHS Center Parcel), and 2075240013 (FHS East Parcel)
- 2075220015 (FHS platform)
- 2075220016 (Sound Transit ROW)
- 2075220050 (Bish property)
- 2075220011 (FHS West Parcel/Acquisition Area)

10.1 Alternatives Analysis

The remedial cost estimate is broken out by the individual tax parcel/group of parcels/portion of parcels. Estimates for each tax parcel/group of parcels/portion of parcels assume that remedial activities would be performed independently of activities on adjacent or nearby tax parcel/group of parcels/portion of parcels such that items like mobilization are individually assessed not shared between properties. Estimates also assume that remediation areas are clear and no costs for demolition and restoration of site features have been included. Excavation and off-site disposal has been assumed to address soil contamination since it is the most cost-effective if the site is clear.

It should be noted that if site features remained present and active, excavation would largely be impractical except in the FHS Parking Lot. An alternative approach in that event would be to implement in-situ chemical oxidant compound injection. Chemical oxidation provides rapid destruction of petroleum contaminants on contact. Since contact is required, implementation would need effective delivery and distribution which is difficult where contamination is shallow at many of the locations identified are. Injection pressures must be kept low. The density of injection points would have to be high, probably in the range of two feet on center. As a rule of thumb, 3 pounds of oxygen is required per one pound of hydrocarbon. Injection near utilities could be problematic since the oxidant compound is corrosive. Any proposed use of a oxidant compound would have to consider the layout of utilities in implementation.

10.2 Regulatory Requirements

As requested by WSDOT, the cost estimate is based upon cleanup values for unrestricted land use as defined in the restrictive covenant that was part of the No Further Action (NFA) determination that was issued for the Site in 2003. The restrictive covenant states that the:

> "Current MTCA Method A cleanup levels have changed significantly since remedial activities were conducted in 1993. However, WAC 173-340-702(12) (c) [2001 ed.] provides that,
>
> 'A release cleaned up under the cleanup levels determined in (a) or (b) of this subsection shall not be subject to further cleanup action due solely to subsequent amendments to the provision in this chapter on cleanup levels.'
>
> A NFA determination was issued for the Site in 2003. However, since the remedial actions were conducted in 1993, MTCA Method A cleanup levels prior to 2001 have been used to determine whether or not the remedial activities at the Site have been effective in protecting human health and the environment."

The January 26, 1996, *Model Toxics Control Act Regulation and Statute: MTCA Cleanup Regulation Chapter 173-340 WAC, Model Toxics Control Act Chapter 70.105D RCW, Uniform Environmental Covenants Act Chapter 64.70 RCW* is the latest version of the regulation released prior to 2001 and therefore applicable for evaluating the extent of contamination at the site. Tables 1 and 2 of the 1996 regulation is provided in Appendix E.

Under the January 26, 1996, MTCA Regulation, cleanup values for diesel and oil in soil; cPAHs in soil; and gasoline, diesel, and oil in groundwater are 200 mg/kg, 1 mg/kg TEF-adjusted sum of cPAHs, and 1 milligram per liter of total petroleum hydrocarbon in groundwater. These values were applied to identify and estimate areas requiring remediation.

Parcels 2075220050 (Bish Parcel), 2075220016 (Sound Transit ROW), and City of Tacoma ROW (south of the tracks) are not within the defined boundaries of the Restrictive Covenant. Therefore, for these parcels/ROW, the 2013 MTCA criteria were considered in evaluating the need for remedial measures.

10.3 Proposed Remedial Actions

A summary of remedial activities assumed for the purpose of cost estimation by area and medium follows.

The analytical results for soil used to identify areas of contamination for this evaluation are presented in Tables 2 through 8 and 11.

The analytical results for groundwater used to identify areas of contamination for this evaluation are presented in Tables 9 and 10.

Cost estimates are provided in Tables 12 through 15. Estimated remedial excavations are shown in Figure 6.

10.4 Soil

For soil, contaminants of concern (COCs) are restricted to diesel, oil, and cPAHs. Acetone, a VOC and common laboratory contaminant, was also widely detected. However, there is not a MTCA Method A criteria for acetone, the detected concentrations are low, and its presence at the site is not consistent with historic site use. Therefore, acetone has not been considered in the evaluation of remedial alternatives. The following remedial activities are assumed based upon the apparent restrictive covenant criteria or 2013 version of MTCA, where applicable.

For each of the proposed soil remediation scenarios, the following assumptions apply:

- Backfill of the excavation following receipt of sampling results with clean soil
- One cubic yard of soil (measured in-place) is estimated to weigh 1.6 tons
- Analytical testing by rapid turnaround
- Coordination with disposal facilities/contractor
- Full-time observation during excavation
- No overexcavation and/or re-sampling of excavation extents
- Final report summarizing sampling, analysis, conclusions, and recommendations

10.4.1 2075200011 (Freighthouse Square [FHS] Parking Lot)

Under the restrictive covenant's 1996 MTCA criteria, there would be two excavations required on the FHS Parking Lot (Table 12):

- Targeted excavation at GP-10 to remove MTCA Method A unrestricted criteria exceedances of diesel, oil, and cPAHs in shallow soil (0 to 2 feet bgs):
  - Estimated 10- by 10- by 2-foot-deep excavation for disposal at Subtitle D facility.
  - Confirmation soil sampling at extents of the excavation for analytical testing purposes (assume five samples for restrictive covenant analyses).
- Targeted excavation at GP-11 to remove MTCA Method A unrestricted criteria exceedances of oil in shallow subsurface soil (10 to 15 feet bgs):
  - Estimated 20- by 20- by 15-foot-deep excavation with the lower 5 feet of soil directed for disposal at Subtitle D facility.
  - Confirmation soil sampling at extents of the excavation for analytical testing purposes (assume five samples for restrictive covenant analyses).

10.4.2 2075220011 (Freighthouse Square [FHS] West Parcel [Non-Acquisition Area]), 2075240011 (Freighthouse Square [FHS] Center Parcel), and 2075240013 (Freighthouse Square [FHS] East Parcel)

Using the restrictive covenant's 1996 values are applicable (Table 13):

- Preparation of management plans as required by the restrictive covenant to accomplish the work.
- Targeted excavation on-site in the vicinity of GP-13 and GP-15 to remove MTCA Method A unrestricted criteria exceedances of oil in shallow surface soil (0 to 3 feet bgs). Assumes off-site results are representative:
  - Estimated 300- by 20- by 3-foot-deep excavation with disposal at a Subtitle D facility.
  - Confirmation soil sampling at extents of the excavation for analytical testing purposes (assume 17 samples for restrictive covenant analyses).
- Targeted excavation on-site in the vicinity of GP-19 to remove MTCA Method A unrestricted criteria exceedances of oil in shallow surface soil (0 to 5 feet bgs). Assumes off-site results are representative:
  - Estimated 20- by 20- by 5-foot-deep excavation with disposal at a Subtitle D facility.
  - Confirmation soil sampling at extents of the excavation for analytical testing purposes (assume five samples for restrictive covenant analyses).
- Targeted excavation in the vicinity of GP-14 to remove MTCA Method A unrestricted criteria exceedances of cPAHs in shallow subsurface soil (5 to 10 feet bgs):
  - Estimated 20- by 20- by 10-foot-deep excavation with the lower 5 feet of soil directed for disposal at Subtitle D facility.
  - Confirmation soil sampling at extents of the excavation for analytical testing purposes (assume five samples for restrictive covenant analyses).
- Targeted excavation centered on SW-17-15 to remove MTCA Method A unrestricted criteria exceedances of cPAHs in subsurface soil (10 to 20 feet bgs):
  - Estimated 40- by 40- by 20-foot-deep excavation with the lower 10 feet of soil directed for disposal at Subtitle D facility.
  - Confirmation soil sampling at extents of the excavation for analytical testing purposes (assume five samples for restrictive covenant analyses).
- Targeted excavation centered on SW-19-15 to remove MTCA Method A unrestricted criteria exceedances of oil in shallow subsurface soil (5 to 10 feet bgs):

- Estimated 20- by 20- by 10-foot-deep excavation with the lower 5 feet of soil directed for disposal at Subtitle D facility.
- Confirmation soil sampling at extents of the excavation for analytical testing purposes (assume five samples for restrictive covenant analyses).

No actionable contamination was identified in soil based upon sampling results for work performed in 1993 on the eastern portion of the property (Engineering Geosciences, Inc., 1994). Therefore, no remedial actions have been identified beyond those identified by sampling performed for this Phase II ESA.

10.4.3 2075220015 (Freighthouse Square [FHS] Platform)

The restrictive covenant's 1996 values are applicable for this site:

- No sampling was performed on this property and no contamination identified.
- Contamination present at FHS-1, GP-4 and GP-14 is proximate to subject parcel and could be sourced on either 2075220011 (FHS West Parcel), 2075240011 (FHS Center Parcel) and 2075240013 (FHS East Parcel), or the subject parcel 2075220015 (FHS platform). Sampling would be required in order to confirm source area.
- Shallow contamination present at GP-18 is proximate to subject parcel and could be sourced on either 2075220016 (Sound Transit ROW) or the subject parcel 2075220015 (FHS platform). Sampling would be required in order to confirm source area.

10.4.4 2075220016 (Sound Transit Right-of-Way [ROW])

The Sound Transit ROW is not within the boundaries of the restrictive covenant. Therefore, remedial activities have been evaluated under the 2013 MTCA requirements (Table 14).

- Targeted excavation centered on GP-7 to remove MTCA Method A unrestricted criteria exceedances of cPAHs in soil (0 to 2 feet bgs):
  - Estimated 10- by 10- by 2-foot-deep excavation for disposal at Subtitle D facility.
  - Confirmation soil sampling at extents of the excavation for analytical testing purposes (assume five samples for cPAHs analyses only).
- Targeted excavation centered on GP-18 to remove MTCA Method A unrestricted criteria exceedances of cPAHs in soil (0 to 2 feet bgs):
  - Estimated 10- by 10- by 2-foot-deep excavation for disposal at Subtitle D facility.

- Confirmation soil sampling at extents of the excavation for analytical testing purposes (assume five samples for cPAHs analyses only).

10.4.5 2075220050 (Bish Property)

The Bish Property is not within the boundaries of the restrictive covenant. Therefore, remedial activities have been evaluated under the 2013 MTCA requirements.

- No contamination was identified in soil above 2013 MTCA criteria. No remediation is required.

10.4.6 Acquisition Area (portion of 2075220011 [Freighthouse Square [FHS] West Parcel/Acquisition Area])

Using the restrictive covenant's 1996 values are applicable (Table 15):

- Preparation of management plans as required by the restrictive covenant to accomplish the work.
- Targeted excavation centered on FHS-1 and GP-4 to remove MTCA Method A unrestricted criteria exceedances of diesel, oil and cPAHs in soil (0 to 20 feet bgs):
  - Estimated 100- by 20- by 20-foot-deep excavation for disposal at Subtitle D facility.
  - Confirmation soil sampling at extents of the excavation for analytical testing purposes (assume 11 samples for restrictive covenant analyses).

10.5 Groundwater

For groundwater, COCs are restricted to arsenic, cadmium, chromium, lead, and mercury, which were detected in total metals analyses. Although diesel and oil are present in groundwater, detected concentrations are less than applicable 1996 MTCA criteria within the area subject to the Restrictive Covenant and less than applicable 2013 MTCA values for parcels 2075220050 (Bish parcel), 2075220016 (Sound Transit ROW), and City of Tacoma ROW.

With regard to the metals in groundwater, cadmium, chromium, lead, and mercury were present in total metals analysis but, not detected in the dissolved analyses. Given this, the elevated concentrations of these metals are likely associated with non-colloidal particulate in the samples. Non-colloidal particulates typically do not migrate with groundwater. The total versus dissolved results demonstrate the lack of mobility and are expected to be sufficient to demonstrate to Ecology that these four metals are not contaminants of concern. None of these four metals were detected at elevated levels in soil. No action is assumed.

Arsenic was detected above regulatory criteria in virtually every total metal analysis for groundwater site wide. Given its wide distribution, its elevated presence on site is likely attributable to the areawide contamination associated with the Tacoma Smelter Plume and not a specific site source. No elevated concentrations were found in surface soil. This information combined suggests that no remedial action is warranted. Also, despite its widespread presence in total metal analyses, arsenic would generally not be expected to be mobile under normal conditions. Under oxidizing conditions, arsenic is largely present as arsenate a generally stable form which is the dominant arsenic species under most environmental conditions. Supporting this, arsenic was only detected in the dissolved analysis of two of the ten groundwater samples where the total concentration exceeded criteria, in monitoring well FHS-1 and geoprobe GP-20. Both these locations are coincident with areas documented to have diesel and oil contamination in groundwater. Microbial activity resulting from the presence of petroleum would likely depress oxygen levels. This hypothesis is supported by measurements of the Oxygen Reduction Potential in FHS-1, which was highly negative (less than minus 700) at the time of sampling. In reducing environments, arsenic speciation reverts to its soluble form arsenite. Outside the hydrocarbon impacted area, arsenite would be expected to revert to arsenate under normal groundwater conditions. Given all this, mobile arsenic as arsenite appears to be confined to areas of petroleum contamination and does not warrant independent action. No remediation is proposed beyond natural attenuation given that petroleum levels do not exceed applicable criteria and arsenic levels are attributable to the REDOX conditions created by the presence of petroleum in groundwater.

10.6 Underground Storage Tanks (USTs)

The Phase I ESA identified the potential for USTs to be present in the vicinity. However, no tanks were confirmed during the Phase II ESA. Therefore, no costs associated with managing USTs is included within this estimate.

11.0 RECOMMENDATIONS

We offer the following recommendations, by parcel:

11.1.1 2075200011 (Freighthouse Square [FHS] Parking Lot)

- Prepare management plans and coordinate with Ecology as required by the restrictive covenant.
- Include in the Contract Language a General Special Provision/Special Provisions indicating the possibility of encountering soil and groundwater contamination and develop requirements associated with handling/disposal/management and health and

safety. Require the contractor to develop submittals demonstrating an understanding of site conditions/regulatory requirements. Include this Phase II ESA as a reference document to the design documents.

- Include contingency funds in construction cost estimates to manage unexpected conditions that may be observed during construction.
- Given the long-term industrial and/or railroad use of the site and because of the restrictive covenant on this parcel, assume soil generated during construction will require offsite disposal at a permitted facility.

11.1.2 2075220011 (Freighthouse Square [FHS] West Parcel), 2075240011 (Freighthouse Square [FHS] Center Parcel), and 2075240013 (Freighthouse Square [FHS] East Parcel)

- Prepare management plans and coordinate with Ecology as required by the restrictive covenant.
- Include in the Contract Language a General Special Provision/Special Provisions indicating the possibility of encountering soil and groundwater contamination and develop requirements associated with handling/disposal/management and health and safety. Require the contractor to develop submittals demonstrating an understanding of site conditions/regulatory requirements. Include this Phase II ESA as a reference document to the design documents.
- Include contingency funds in construction cost estimates to manage unexpected conditions that may be observed during construction.
- Given the long-term industrial and/or railroad use of the site and because of the restrictive covenant on this parcel, assume soil generated during construction will require offsite disposal at a permitted facility.

11.1.3 2075220015 (Freighthouse Square [FHS] Platform)

While there is no known contamination on this parcel, given the long-term industrial/railroad use of this parcel and vicinity, we provide similar recommendations as adjacent parcels.

- Prepare management plans and coordinate with Ecology as required by the restrictive covenant.
- Include in the Contract Language a General Special Provision/Special Provisions indicating the possibility of encountering soil and groundwater contamination and develop requirements associated with handling/disposal/management and health and safety. Require the contractor to develop submittals demonstrating an understanding of site conditions/regulatory requirements. Include this Phase II ESA as a reference document to the design documents.

- Include contingency funds in construction cost estimates to manage unexpected conditions that may be observed during construction.
- Given the long-term industrial and/or railroad use of the site and because of the restrictive covenant on this parcel, assume soil generated during construction will require offsite disposal at a permitted facility.

11.1.4 2075220016 (Sound Transit Right-of-Way [ROW])

While there is no known contamination on this parcel, given the long-term industrial/railroad use of this parcel and vicinity, we provide similar recommendations as adjacent parcels.

- Include contingency funds in construction cost estimates to manage unexpected conditions that may be observed during construction.
- Include in the Contract Language a General Special Provision/Special Provisions indicating the possibility of encountering soil and groundwater contamination and develop requirements associated with handling/disposal/management and health and safety. Require the contractor to develop submittals demonstrating an understanding of site conditions/regulatory requirements. Include this Phase II ESA as a reference document to the design documents.
- Include contingency funds in construction cost estimates to manage unexpected conditions that may be observed during construction.
- Given the long-term industrial and/or railroad use of the site and because of the restrictive covenant on this parcel, assume soil generated during construction will require offsite disposal at a permitted facility.

11.1.5 2075220050 (Bish Property)

While there is no known contamination on this parcel, given the long-term industrial/railroad use of this parcel and vicinity, we provide similar recommendations as adjacent parcels.

- Include contingency funds in construction cost estimates to manage unexpected conditions that may be observed during construction.
- Include in the Contract Language a General Special Provision/Special Provisions indicating the possibility of encountering soil and groundwater contamination and develop requirements associated with handling/disposal/management and health and safety. Require the contractor to develop submittals demonstrating an understanding of site conditions/regulatory requirements. Include this Phase II ESA as a reference document to the design documents.

- Include contingency funds in construction cost estimates to manage unexpected conditions that may be observed during construction.
- Given the long-term industrial and/or railroad use of the site and because of the restrictive covenant on this parcel, assume soil generated during construction will require offsite disposal at a permitted facility.

11.1.6 Acquisition Area (portion of 2075220011 [Freighthouse Square [FHS] West Parcel])

- Prepare management plans and coordinate with Ecology as required by the restrictive covenant.
- Include in the Contract Language a General Special Provision/Special Provisions indicating the possibility of encountering soil and groundwater contamination and develop requirements associated with handling/disposal/management and health and safety. Require the contractor to develop submittals demonstrating an understanding of site conditions/regulatory requirements. Include this Phase II ESA as a reference document to the design documents.
- Include contingency funds in construction cost estimates to manage unexpected conditions that may be observed during construction.
- Given the long-term industrial and/or railroad use of the site and because of the restrictive covenant on this parcel, assume soil generated during construction will require offsite disposal at a permitted facility.

12.0 LIMITATIONS

Within the limitations of scope, schedule, and budget, Shannon & Wilson, Inc. has prepared this report in a professional manner, using the level of skill and care normally exercised for similar projects under similar conditions by reputable and competent environmental consultants currently practicing in this area.

The scope of services was intended to address only those environmental concerns with significant potential to result in contamination of the Site. The sampling effort was considered limited in extent and served as a screening effort only. It was not intended to define the lateral or vertical extent of soil and/or groundwater contamination.

The data presented in this report are based on limited research and sampling at the site and should be considered representative at the time of our observations. Other areas of contamination that were not obvious during our site work could be present at the site. Shannon & Wilson, Inc. is not responsible for conditions or consequences arising from relevant facts that were concealed, withheld, or not fully disclosed at the time the report was prepared. We also note that the facts

This report was prepared for the exclusive use of Parsons Brinckerhoff, WSDOT, and their representatives, and in no way guarantees that any agency or its staff will reach the same conclusions as Shannon & Wilson, Inc. To help you and others in understanding the limitations of our report, Shannon & Wilson, Inc. has prepared Appendix F, "Important Information About Your EnvironmentalSite Assessment/Evaluation Report."

Notes:
-- = not applicable
Cr = chromium
Dx = analysis for diesel- and oil-range hydrocarbons by method Northwest Total Petroleum Hydrocarbon-Diesel
FHS = Freighthouse Square
GP = geoprobe
Gx = analysis for gasoline-range hydrocarbons by method Northwest Total Petroleum Hydrocarbon-Gasoline
Metals = analysis for metals by U.S. Environmental Protection Agency methods 6000/7000/200 series
PAHs = analysis for polycyclic aromatic hydrocarbons by the U.S. Environmental Protection Agency method 8270D Selective Ion Monitoring
Pb = lead
PCBs = analysis for polychlorinated biphenyls by U.S. Environmental Protection Agency method 8082A
SVOCs = analysis for semi-volatile organic compounds by U.S. Environmental Protection Agency method 8270D Selective Ion Monitoring
TCLP = analysis for Toxicity Characteristic Leaching Procedure compounds by U.S. Environmental Protection Agency method 1311/ 6010C
VOCs = analysis for volatile organic compounds by U.S. Environmental Protection Agency method 8260B

Notes:
[A] Screening criteria are for chromium (III).
-- = not analyzed
< = parameter not detected above the method detection limit shown
Bold indicates parameter detected above method detection limits.
Shaded cell indicates parameter detected above one or more screening criterion.
cPAHs = carcinogenic polynuclear aromatic hydrocarbons
EPA = U.S. Environmental Protection Agency
J = estimated value following data quality review
NA = not applicable
NE = no criterion established
NWTPH-Dx = analysis for diesel- and oil-range hydrocarbons by method Northwest Total Petroleum Hydrocarbon-Diesel
NWTPH-Gx = analysis for gasoline-range hydrocarbons by method Northwest Total Petroleum Hydrocarbon-Gasoline
PAHs = polynuclear aromatic hydrocarbons
PCBs = polychlorinated biphenyls
RL = parameters not detected above their respective method detection limits
SIM = Selective Ion Monitoring
SVOCs = semi-volatile organic compounds
VOCs = volatile organic compounds
TEF = toxicity eequivalence factor

Notes:

[1] Calculated as the detected concentration times the TEF, or as half the method detection limit (if analyte is not detected) times the toxicity equivalence factor.

[2] Sum of the TEF for each cPAH.

Bold values indicated a detection.

cPAHs = carcinogenic polynuclear aromatic hydrocarbons

mg/kg = milligrams per kilogram

MTCA = Washington Model Toxics Control Act

ND = not detected

TEF = toxicity equivalence factor

IMPORTANT INFORMATION ABOUT YOUR ENVIRONMENTAL SITE ASSESSMENT/EVALUATION REPORT

IMPORTANT INFORMATION ABOUT YOUR ENVIRONMENTAL SITE ASSESSMENT/EVALUATION REPORT

ENVIRONMENTAL SITE ASSESSMENTS/EVALUATIONS ARE PERFORMED FOR SPECIFIC PURPOSES AND FOR SPECIFIC CLIENTS.

This report was prepared to meet the needs you specified with respect to your specific site and your risk management preferences. Unless indicated otherwise, we prepared your report expressly for you and for the purposes you indicated. No one other than you should use this report for any purpose without first conferring with us. No one is authorized to use this report for any purpose other than that originally contemplated without our prior written consent.

The findings and conclusions documented in this site assessment/evaluation have been prepared for specific application to this project and have been developed in a manner consistent with that level of care and skill normally exercised by members of the environmental science profession currently practicing under similar conditions in this area. The conclusions presented are based on interpretation of information currently available to us and are made within the operational scope, budget, and schedule constraints of this project. No warranty, express or implied, is made.

OUR REPORT IS BASED ON PROJECT-SPECIFIC FACTORS.

Our environmental site assessment is based on several factors and may include (but not be limited to): reviewing public documents to chronicle site ownership for the past 30, 40, or more years; investigating the site's regulatory history to learn about permits granted or citations issued; determining prior uses of the site and those adjacent to it; reviewing available topographic and real estate maps, historical aerial photos, geologic information, and hydrologic data; reviewing readily available published information about surface and subsurface conditions; reviewing federal and state lists of known and potentially contaminated sites; evaluating the potential for naturally occurring hazards; and interviewing public officials, owners/operators, and/or adjacent owners with respect to local concerns and environmental conditions.

Except as noted within the text of the report, no sampling or quantitative laboratory testing was performed by us as part of this site assessment. Where such analyses were conducted by an outside laboratory, Shannon & Wilson relied upon the data provided and did not conduct an independent evaluation regarding the reliability of the data.

CONDITIONS CAN CHANGE.

Site conditions, both surface and subsurface, may be affected as a result of natural processes or human influence. An environmental site assessment/evaluation is based on conditions that existed at the time of the evaluation. Because so many aspects of a historical review rely on third party information, most consultants will refuse to certify (warrant) that a site is free of contaminants, as it is impossible to know with absolute certainty if such a condition exists. Contaminants may be present in areas that were not surveyed or sampled, or may migrate to areas that showed no signs of contamination at the time they were studied.

Unless your consultant indicates otherwise, your report should not be construed to represent geotechnical subsurface conditions at or adjacent to the site and does not provide sufficient information for construction-related activities. Your report also should not be used following floods, earthquakes, or other acts of nature; if the size or configuration of the site is altered; if the location of the site is modified; or if there is a change of ownership and/or use of the property.

INCIDENTAL DAMAGE MAY OCCUR DURING SAMPLING ACTIVITIES.

Incidental damage to a facility may occur during sampling activities. Asbestos and lead-based paint sampling often require destructive sampling of pipe insulation, floor tile, walls, doors, ceiling tile, roofing, and other building materials. Shannon & Wilson does not provide for paint repair. Limited repair of asbestos sample locations are provided. However, Shannon & Wilson neither warranties repairs made by our field personnel, nor are we held liable for injuries or damages as a result of those repairs. If you desire a specific form of repair, such as those provided by a licensed roofing contractor, you need to request the specific repair at the time of the proposal. The owner is responsible for repair methods that are not specified in the proposal.

READ RESPONSIBILITY CLAUSES CAREFULLY.

Environmental site assessments/evaluations are less exact than other design disciplines because they are based extensively on judgment and opinion, and there may not have been any (or very limited) investigation of actual subsurface conditions. Wholly unwarranted claims have been lodged against consultants. To limit this exposure, consultants have developed a number of clauses for use in their contracts, reports, and other documents. These responsibility clauses are not exculpatory clauses designed to transfer the consultant's liabilities to other parties; rather, they are definitive clauses that identify where responsibilities begin and end. Their use helps all parties involved recognize their individual responsibilities and take appropriate action. Some of these definitive clauses may appear in this report, and you are encouraged to read them closely. Your consultant will be pleased to give full and frank answers to your questions.

Consultants cannot accept responsibility for problems that may develop if they are not consulted after factors considered in their reports have changed, or conditions at the site have changed. Therefore, it is incumbent upon you to notify your consultant of any factors that may have changed prior to submission of the final assessment/evaluation.

An assessment/evaluation of a site helps reduce your risk, but does not eliminate it. Even the most rigorous professional assessment may fail to identify all existing conditions.

ONE OF THE OBLIGATIONS OF YOUR CONSULTANT IS TO PROTECT THE SAFETY, HEALTH, PROPERTY, AND WELFARE OF THE PUBLIC.

If our environmental site assessment/evaluation discloses the existence of conditions that may endanger the safety, health, property, or welfare of the public, we may be obligated under rules of professional conduct, statutory law, or common law to notify you and others of these conditions.

CERTIFICATION

I hereby certify that I have personally examined and am familiar with the information submitted in this document and any supporting material. Based on my inquiry of those individuals immediately responsible for obtaining the information, the information submitted is true, accurate and complete to the best of my knowledge and ability and that all known and suspected hazards have been disclosed. I agree that the generator and/or transporter will abide by all conditions specified in line (L) or any attachments thereto.

Re: Analytical Data for Project 21-1-22032-007
Laboratory Reference No. 1508-234

Dear Agnes:

Enclosed are the analytical results and associated quality control data for samples submitted on August 21, 2015.

The standard policy of OnSite Environmental, Inc. is to store your samples for 30 days from the date of receipt. If you require longer storage, please contact the laboratory.

We appreciate the opportunity to be of service to you on this project. If you have any questions concerning the data, or need additional information, please feel free to call me.

Sincerely,

David Baumeister
Project Manager

OnSite Environmental Inc.

Data Qualifiers and Abbreviations

A - Due to a high sample concentration, the amount spiked is insufficient for meaningful MS/MSD recovery data.

B - The analyte indicated was also found in the blank sample.

C - The duplicate RPD is outside control limits due to high result variability when analyte concentrations are within five times the quantitation limit.

E - The value reported exceeds the quantitation range and is an estimate.

F - Surrogate recovery data is not available due to the high concentration of coeluting target compounds.

H - The analyte indicated is a common laboratory solvent and may have been introduced during sample preparation, and be impacting the sample result.

I - Compound recovery is outside of the control limits.

J - The value reported was below the practical quantitation limit. The value is an estimate.

K - Sample duplicate RPD is outside control limits due to sample inhomogeneity. The sample was re-extracted and re-analyzed with similar results.

L - The RPD is outside of the control limits.

M - Hydrocarbons in the gasoline range are impacting the diesel range result.

M1 - Hydrocarbons in the gasoline range (toluene-napthalene) are present in the sample.

N - Hydrocarbons in the lube oil range are impacting the diesel range result.

N1 - Hydrocarbons in diesel range are impacting lube oil range results.

O - Hydrocarbons indicative of heavier fuels are present in the sample and are impacting the gasoline result.

P - The RPD of the detected concentrations between the two columns is greater than 40.

Q - Surrogate recovery is outside of the control limits.

S - Surrogate recovery data is not available due to the necessary dilution of the sample.

T - The sample chromatogram is not similar to a typical _____.

U - The analyte was analyzed for, but was not detected above the reported sample quantitation limit.

U1 - The practical quantitation limit is elevated due to interferences present in the sample.

V - Matrix Spike/Matrix Spike Duplicate recoveries are outside control limits due to matrix effects.

W - Matrix Spike/Matrix Spike Duplicate RPD are outside control limits due to matrix effects.

X - Sample extract treated with a mercury cleanup procedure.

X1- Sample extract treated with a Sulfuric acid/Silica gel cleanup procedure.

Y - The calibration verification for this analyte exceeded the 20% drift specified in method 8260C, and therefore the reported result should be considered an estimate. The overall performance of the calibration verification standard met the acceptance criteria of the method.

Z -

ND - Not Detected at PQL
PQL - Practical Quantitation Limit
RPD - Relative Percent Difference

This report pertains to the samples analyzed in accordance with the chain of custody, and is intended only for the use of the individual or company to whom it is addressed.

Notes:
-- = not applicable
Cr = Chromium
Dx = analysis for diesel- and oil-range hydrocarbons by method Northwest Total Petroleum Hydrocarbon-Diesel
ft = feet
Gx = analysis for gasoline-range hydrocarbons by method Northwest Total Petroleum Hydrocarbon-Gasoline
Metals = analysis for metals by U.S. Environmental Protection Agency (EPA) methods 6000/7000/200 series
PAHs = analysis for polycyclic aromatic hydrocarbons by EPA method 8270D Selective Ion Monitoring (SIM)
Pb = Lead
PCBs = analysis for polychlorinated biphenyls by EPA method 8082A
SVOCs = analysis for semi-volatile organic compounds by EPA method 8270D SIM
TCLP = analysis for Toxicity Characteristic Leaching Procedure compounds by EPA method 1311/ 6010C
VOCs = analysis for volatile organic compounds by EPA method 8260B

Notes:
-- = not analyzed
<= parameter not detected above the method detection limit shown
[A] Screening criteria are for chromium (III).
[B] Dangerous Waste criteria for chromium is 1 milligrams per liter
[C] Dangerous Waste criteria for chromium is 1 milligrams per liter
EPA = US Environmental Protection Agency
ft = feet
(J) = estimated value following data quality review
mg/kg = milligram per killigram
MTCA = Model Toxics Control Act Cleanup Regulation
NA = not applicable
NE = no criterion established
NWTPH-Dx = analysis for diesel- and oil-range hydrocarbons by method Northwest Total Petroleum Hydrocarbon-Diesel
NWTPH-Gx = analysis for gasoline-range hydrocarbons by method Northwest Total Petroleum Hydrocarbon-Gasoline
PAHs = polynuclear aromatic hydrocarbons
PCBs = polychlorinated biphenyls
RL = parameters not detected above their respective method detection limits
SIM = Selective Ion Monitoring
SVOCs = semi-volatile organic compounds
VOCs = volatile organic compounds
Bold indicates parameter detected above method detection limits
Shaded cell indicates parameter detected above one or more screening criterion

Notes:
-- = not analyzed
< = parameter not detected above the method detection limit shown
[A] Screening criteria are for chromium (III)
[C] Dangerous Waste criteria for chromium is 1 milligrams per liter
(DUP) = duplicate Sample
EPA = US Environmental Protection Agency
ft = feet
mg/kg = milligram per killigram
MTCA = Model Toxics Control Act Cleanup Regulation
NA = not applicable
NE = no criterion established
NWTPH-Dx = analysis for diesel- and oil-range hydrocarbons by method Northwest Total Petroleum Hydrocarbon-Diesel
NWTPH-Gx = analysis for gasoline-range hydrocarbons by method Northwest Total Petroleum Hydrocarbon-Gasoline
PAHs = polynuclear aromatic hydrocarbons
PCBs = polychlorinated biphenyls
RL = parameters not detected above their respective method detection limits
SIM = Selective Ion Monitoring
SVOCs = semi-volatile organic compounds
VOCs = volatile organic compounds
Bold indicates parameter detected above method detection limits
Shaded cell indicates parameter detected above one or more screening criterion

TABLE 5
SUMMARY OF SOIL ANALYTICAL RESULTS
PARCEL #2075240013 (FHS EAST PARCEL)

Parameter	Method	MTCA Method A Soil Cleanup Levels (1996), mg/kg		MTCA Method B Soil Cleanup Levels (2015), mg/kg		GP-17 8/21/15		GP-19 8/21/15			GP-20 8/21/15
